Active Production Deployment

EXECUTIVE SUMMARY

Forma is an AI design copilot prototype built for product designers, UX researchers, and engineering teams. It bridges natural-language design prompts, context-aware microcopy generation, and qualitative usability feedback synthesis into a single unified workflow — styled with a crisp, Swiss-inspired **minimal light theme**.

By eliminating interface bloat and cognitive friction, Forma enables teams to brainstorm layouts, calibrate copy tone, and transform user test friction notes into prioritized design solutions.

CORE AI DESIGN CAPABILITIES

PILLAR 1

Layout Brainstormer

Converts interface prompts into structured, responsive wireframes.

- **Archetype Presets:** SaaS Analytics, E-Commerce PDP, Mobile Banking, and Onboarding Wizard.
- **Multi-Device Preview:** 1-click toggle between Desktop (980px) and Mobile (380px) viewports.
- **Modular Blocks:** Navbars, KPI metric cards, telemetry sparklines, and activity feeds.

PILLAR 2

UI Copy Generator

Crafts microcopy tailored to specific component constraints and brand voice.

- **Targeting:** Call to Action (CTA) buttons, Hero Headlines, Empty States, and Error Alerts.
- **Tone Controls:** Minimal & Direct, Playful & Friendly, and Enterprise Trust.
- **Live Preview:** Real-time in-context component rendering with 1-click copy action.

PILLAR 3

Usability Synthesizer

Ingests raw feedback transcripts and clusters friction points into prioritized fixes.

- **Metrics Engine:** Quantified Friction Score (0–100) and Sentiment Polarity (% breakdown).
- **Evidence Extraction:** Highlights user verbatim quotes and friction frequency.
- **Design Backlog:** Compiles actionable recommendations ready for product delivery.

DESIGN PHILOSOPHY & ARCHITECTURE

Design Principle	Technical Implementation	User & Team Benefit
Minimal Light Theme	Pure #ffffff cards, subtle #e4e4e7 borders, #18181b onyx typography.	Zero visual fatigue, high contrast, distraction-free focus on interface structure.
Self-Contained Engine	Zero external asset dependencies; embedded responsive styles and logic.	Works universally online, offline, and across all browsers without server setup.
Instant Feedback Loop	Pre-calculated heuristics and state management with zero latency.	Sub-millisecond switching between layouts, tones, and usability case studies.

PROJECT LINKS & REPOSITORY ACCESS

Live Web Prototype: <https://design-comp.vercel.app/>

GitHub Repository: <https://github.com/SeyadMohammedFaheem/design-comp>

Continuous deployment enabled via Vercel on push to the GitHub main branch.
